

Medicaid Managed Care Reform

The problem: Medicaid drug costs are increasing, pharmacy reimbursements are decreasing. Something isn't adding up.

As pharmacy reimbursement rates are ratcheted down, pharmacy providers are frequently reimbursed at rates that leave them “underwater” on the medications they dispense. Eventually, this leads to drastic negative effects on pharmacy providers as well as the vulnerable Medicaid beneficiaries who they serve. Meanwhile, Medicaid budgets are soaring.

The cause: PBMs are pocketing millions of dollars by using opaque business practices, such as spread pricing.

States have found that an excessive amount of taxpayer dollars remain with pharmacy benefit managers (PBMs).

- The Centers for Medicare and Medicaid Services has effectively eliminated spread pricing due to concerns that PBMs’ use of “spread pricing is inflating prescription drug costs that are borne by beneficiaries and by taxpayers.”
- Pennsylvania: Between 2013 and 2017, the amount that taxpayers paid to PBMs for Medicaid enrollees more than doubled from \$1.41 billion to \$2.86 billion.
- Ohio: the state Auditor found that, of the \$2.5 billion that’s spent annually through PBMs on Medicaid prescription drugs, PBMs pocketed \$224.8 million through the spread alone during a one-year period.
- Kentucky: In response to a state report that found state PBMs keep \$123.5 million in spread annually, the Attorney General has launched an investigation into allegations that the PBMs have overcharged the state and discriminated against independent pharmacies.
- Louisiana: PBMs retained \$42 million that was incorrectly listed as “medical costs.”
- New York: After discovering PBMs in the Medicaid managed care program used spread pricing to pocket a 32% markup on generic prescriptions, a legislative committee investigated PBM practices and found “PBMs often employ controversial utilization and management tools to generate revenue for themselves in a way that is detrimental to health plan sponsors, patients, and pharmacies.”
- Michigan: Drug price manipulation allowed PBMs to overcharge Michigan Medicaid by at least \$64 million.¹

The solution: Increase PBM Transparency/Accountability and Ensure State Oversight of Medicaid Managed Care Programs

- **Carve pharmacy benefits out of the Medicaid managed care program and administer the benefits through the fee-for-service program**

West Virginia saved over \$54.4 million in one year by carving its Medicaid pharmacy benefits out of the managed care program. Because PBMs have failed to control drug costs, California has decided to carve pharmacy benefits out of its Medicaid managed care program. Michigan carved pharmacy benefits out of the Medicaid managed care program after determining the move will not only result in cost savings but will “also result in significantly streamlined administration for Michigan’s health care providers and coverage consistency for program beneficiaries.” In Texas, a state-commissioned study has shown that carving pharmacy benefits out of the Medicaid managed care program could save the state up to \$90.3 million a year. The Louisiana State Legislature enacted legislation authorizing the Department of Health to remove pharmacy services from the Medicaid managed care program in its efforts to control costs.²

- **Avoid PBM spread by adopting a pass-through pricing model**

CMS has issued guidance that essentially eliminates spread pricing in Medicaid managed care, and states can further increase transparency by requiring pass-through pricing models. Under a pass-through pricing model, PBMs are paid an administrative fee, which is the only source of revenue under the contract, thus avoiding any costly PBM spread. Arkansas, Louisiana, and New York have implemented a pass-through pricing model for their Medicaid managed care programs, and Ohio made the same decision after a state-commissioned report showed the move could save the state over \$16 million while increasing pharmacy reimbursement by over \$191 million. Realizing the move would improve access to pharmacists’ care, Georgia’s Medicaid managed care organizations will be switching to a pass-through pricing model.³

- **Require PBMs in the Medicaid managed care program to reimburse pharmacies at fee-for-service rates**

As shown by Iowa, Kansas, Louisiana, Mississippi, Arkansas, and North Carolina, state Medicaid programs have the authority to ensure reasonable contract terms between MCOs/PBMs and community pharmacies - for example, competitive reimbursement rates.

These states know how their tax dollars are being spent because they establish the reimbursement rates for pharmacy services in their Medicaid managed care programs. In those states, PBMs must reimburse pharmacies at the same rates established under the fee-for-service program.⁴

- **Increasing regulatory oversight over PBMs in the Medicaid managed care program**

Some states have passed legislation giving Medicaid officials greater oversight over the PBM Medicaid managed care contracts. In Kentucky, Medicaid officials now have greater oversight over PBM contracts and use of tax dollars in the Medicaid managed care program. This oversight allowed the Kentucky Department for Medicaid Services to analyze the use of spread pricing in the state, leading the Department to recommend that the state further increase transparency by eliminating spread pricing and implementing a reimbursement floor equal to fee-for-service rates. Additionally, Virginia and Georgia have passed legislation requiring disclosure of the PBM spread in their Medicaid programs.⁵
